Wearaseal

Moly Disulfide Infused Hard Chrome

Wearaseal is Empire's original proprietary Hard Chrome combined with moly disulfide. This proprietary wear-release treatment process locks in micron-sized moly disulfide for longer lasting lubricity or release, without degrading the base material. It yields dramatically increased wear life and corrosion protection resulting in lower wear-related operational costs.

Advantages:

- Increased wear resistance due to lower coefficient of friction
- Superior bonding through micro-penetration
- Easy to remove without affecting base metal finish
- Low temperature (130°F) process
- High thermal conductivity

Applications:

- Process tooling – molds, dies, rolls, hydraulics
- Production parts – aerospace, automotive, textile

Availability:

Several surface finishes and thicknesses to provide the hardness, friction release and corrosion properties your application demands
